

Circularity for Educators

01. Scope

Introduction

Prof. ir. Mathijs (Thijs) F. Asselbergs
Professor of Architectural Engineering
Department of Architectural Engineering + Technology (AE+T)

Circularity.
Circular design.
Integrating circularity.

integral part of the built environment.

So, let's work towards a circular built environment together!

What is that?
How do we do that?
Why do we do that?
What does that look like?

And are there good and inspiring examples?
Why are these good?
Who is working on it?
And what have they achieved?

How can we teach circularity?
Can teachers learn from students?

The world demands we reconsider our ways of designing and building.

We have to reduce,
Reuse more
And add value through good design.

We are looking for new, sustainable approaches that convince.

We learn from each other.
And inform each other.

We are experimenting so that circular design is an
